

His weight when in Egypt was 9st. 3lbs.
Present weight. 8st 4lbs.

On front on inspection. there is some flatness at L. apex.
L. chest expands badly. Plentiful, fine, crepitations,
& heard at L. apex as far as the third rib with Bronchial
breathing.

only on L. side movement of ribs a good deal more
limited than on the R. side coarse crepitations heard on
L. side from apex to 5th Rib with v. Bronchial breathing over
that area & vocal resonance on R. side a few scattered
over whole lung are heard.

There is a slight evening dyspnea 99.2 Tubercle
bacilli found in sputum.
